# About the Dashboard

This Power BI report analyses Uber's ride-booking data to help operations and finance teams track bookings, revenue and vehicle-level performance. The report has **4 pages** and every page shares the same left-hand vehicle filter panel, so any metric on the report can be sliced instantly by vehicle type.

## Report Pages

| PAGE                    | WHAT IT SHOWS                                                                                                                   |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| 1. Home                 | Landing page with Uber branding and navigation into the report                                                                  |
| 2. Overview             | Core KPIs, completed/cancelled/incomplete split, monthly & quarterly trend, revenue by vehicle, top pickup location and ratings |
| 3. Overview of Vehicles | A single detail table comparing every vehicle type on bookings, customers, revenue and monthly trend                            |
| 4. Revenue              | Revenue trend by month, revenue by payment method, and revenue by vehicle type                                                  |

## Vehicle Filter (used on every page)

A row of clickable vehicle icons drives every visual on the report:

## Tech Stack

## 02 • REPORT PAGE

## Overview Page

Overview page — filtered to "Premier Sedan"

## KPI Strip

- Completed Bookings
- Lost Booking
- Revenue
- Total Distance
- Average Distance

## Booking Status Split

- **Completed** — ride completed successfully
- **Cancelled** — ride cancelled for any reason
- **Incomplete** — ride incomplete for any reason

## Trends &amp; Breakdown

- **Toggle** Month / Quarter view for the booking trend line
- Monthly revenue bar chart (Jan–Dec)
- Revenue by Vehicle Type
- Top Pickup Location by booking count

## Ratings

- Average of Driver Ratings
- Average of Customer Rating

# Overview of Vehicles Page

Overview of Vehicles page — comparison table across all vehicle types

A single detail table lets stakeholders compare every vehicle category side by side, with a Total row for report-wide reconciliation.

## Table Columns

| COLUMN             | DESCRIPTION                                                                            |
|--------------------|----------------------------------------------------------------------------------------|
| Img / Vehicle Type | Vehicle icon and category name — Uber XL, Premier Sedan, Go Sedan, Go Mini, Bike, Auto |
| Completed          | Count of successfully completed bookings for that vehicle                              |
| Lost Booking       | Count of cancelled / incomplete bookings for that vehicle                              |
| Customer Count     | Distinct customers served by that vehicle type                                         |
| Revenue            | Total revenue generated by that vehicle type                                           |
| Revenue by Month   | Sparkline showing the monthly revenue trend per vehicle                                |

The Total row cross-checks against the Overview and Revenue page KPI cards.

## 04 • REPORT PAGE

## Revenue Page

Revenue page — filtered to "Auto"

## Revenue Trend

- Revenue by Month — line chart, Jan to Dec
- Same KPI strip as Overview, scoped to Revenue analysis

## Revenue Breakdown

- Revenue by Payment Method — UPI, Cash, Uber Wallet, Credit Card, Debit Card
- Revenue by Vehicle Type — horizontal bar ranking across all 6 vehicles

UPI leads as the dominant payment method across every vehicle-type filter tested.

# Dashboard Workflow

How the raw Uber trip data was turned into this 4-page Power BI report.

## Stage-wise Detail

| STAGE               | KEY ACTIVITIES                                                                                                                                               |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Data Collection     | Bring together bookings, vehicle master, customer, driver-rating and payment-method data into one working dataset.                                           |
| Power Query Cleanup | Remove duplicate booking IDs, standardize vehicle-type names (Auto, Bike, Go Mini, Go Sedan, Premier Sedan, Uber XL), handle missing distance/rating values. |
| Data Modeling       | Build table relationships and DAX measures for Completed / Lost Bookings, Revenue, Average Distance, Average Ratings and Revenue by Payment Method.          |
| Report Build        | Design the Home, Overview, Overview of Vehicles and Revenue pages; add the shared vehicle-icon slicer synced across all pages.                               |
| Publish & Share     | Validate KPI totals against the source data, publish the report, and share it as a project showcase.                                                         |
